

Contents

1. An overview and a purpose of the monograph.....	5
2. Introduction to the Global Path Planning (GPP)	7
2.1. General problem description	7
2.2. Definition of the GPP	8
2.3. Global Path Planning and Local Movement Planning	9
2.4. Search space and configuration space	10
2.5. Environment representation methods	11
2.6. Mathematical formulation of the problem.....	16
3. Classical methods for solving GPP	20
3.1. Roadmap methods	20
3.1.1. Visibility graph methods	20
3.1.2. Shortest path map methods	22
3.1.3. Shortest path methods using triangulation	23
3.1.4. Voronoi diagrams	25
3.1.5. Probabilistic roadmaps	26
3.1.6. Rapidly exploring random trees	29
3.2. Artificial Potential Fields methods.....	30
3.2.1. Artificial Potential Fields	30
3.2.2. Wavefront planning.....	33
3.3. Graph search techniques used in the GPP	34
3.3.1. Depth First Search (DFS).....	34
3.3.2. Breadth First Search (BFS)	35
3.3.3. Uniform Cost Search (UCS) and the Dijkstra Algorithm.....	36
3.3.4. Trulla algorithm	37
3.3.5. A* algorithm	38
4. Advanced heuristic methods in the GPP	42
4.1. Evolutionary computing in the GPP.....	42
4.1.1. Genetic algorithms in the GPP	42
4.1.2. Memetic algorithms for the GPP.....	52
4.1.3. Improvement and repair methods for GPP.....	66
4.1.4. Numerical examples.....	79
4.2. Ant Colony Optimization based algorithms.....	95
4.3. Particle swarm based optimization GPP	103
4.4. Simulated annealing in GPP.....	107
5. Summary	112
6. References.....	118
